ABSTRACTED-PUB-NO: US 5583758A
BASIC-ABSTRACT:

The health care management system includes a processing unit (302) and health condition guidelines. The user inputs information (304) related to the health condition of an individual and guideline-recommended treatments are identified. The user also inputs actual or proposed treatments for the individual. *→ 1 recorded category of rec. Q&As*

The resulting comparative information can be used to modify the actual or proposed treatment or provide reasons for the difference between actual/proposed and guideline recommended treatment.

USE/ADVANTAGE - Health care management system for use by hospitals, physicians, insurance companies, etc. Comparative information can be used by reviewer for evaluation or utilisation purposes.

ABSTRACTED-PUB-NO:

US 5953704A EQUIVALENT-ABSTRACTS:

An electronic system for managing medical treatments and resources required for the treatments, wherein a treatment is recommended to a care giver and the care giver

proposes a treatment, comprising:

means for entering a user-proposed treatment and the resources required for the proposed treatment;

resource display means for displaying on a display device for a user one or more medical resources required to implement a recommended treatment and those required for the proposed treatment so that the required resources can be readily compared;

treatment comparison means for comparing the resources required for the proposed treatment with the resources required for a recommended treatment, and notifying a user that specialist review is required for a proposed treatment that requires resources that vary from those required for a recommended treatment;

final recommendation for treatment input means for entering a final recommendation for a treatment identified by a care giver and for accepting from a user information to explain any variance in resources between the final recommendation and the recommended treatment.

The health care management system includes a processing unit (302) and health condition guidelines. The user inputs information (304) related to the health condition of an individual and guideline-recommended treatments are identified. The user also inputs actual or proposed treatments for the individual.

The resulting comparative information can be used to modify the actual or proposed treatment or provide reasons for the difference between actual/proposed and guideline recommended treatment.

USE/ADVANTAGE - Health care management system for use by hospitals, physicians, insurance companies, etc. Comparative information can be used by reviewer for evaluation or utilisation purposes.
